(54) Title: METHOD AND NETWORK FOR DOWNLOADING DATA TO MOBILE DEVICES

(57) Abstract: The method of the invention for downloading data to mobile devices belonging to a mobile telecommunications network is characterized by that information of device capabilities and/or subscriber information of the mobile devices in the network are stored. When downloading of update information to one or more mobile devices is initiated in some way, a message with update information to be sent to said one or more mobile devices is formed on the basis of said stored information. The formed information message is then downloaded to said one or more mobile devices. The network of the invention for downloading data to mobile devices, comprising mobile devices and a mobile telecommunications network to which the mobile devices belong, is characterized in that it further comprises a repository containing information of terminal capabilities and/or subscriber information of the mobile devices in the network.
